

To better assist you with your healthcare needs, we employ a dedicated team of professionals, including Advanced Practice Providers (APPs) - Nurse Practitioners and Physician Assistants. Our APPs play a crucial role in our commitment to deliver efficient and timely healthcare. Here is some information to help you understand our team approach and the role of our Nurse Practitioners and Physician Assistants:

Advanced Practice Providers (APPs): Our APPs are healthcare professionals with advanced training and education. They are licensed to practice medicine and work in collaboration with our physicians. They can diagnose, treat, and manage a variety of medical conditions.

Nurse Practitioners (NPs): NPs are registered nurses with advanced training and education. They can provide primary and specialty healthcare services, order and interpret tests, diagnose and treat illnesses, and prescribe medications.

Physician Assistants (PAs): PAs are medical professionals who diagnose illnesses, develop and manage treatment plans, and can prescribe medications. They work under the supervision of a physician but have the ability to manage a wide range of health issues.

At Focus Neurohealth, we believe in the power of teamwork and collaboration in providing you with the best possible healthcare. Our APPs, NPs, APPs play a crucial role in your healthcare journey. Here's an overview of their responsibilities:

- **Collaborative Care:** Our APPs work under the direction of, and in close collaboration with, your neurologist. This ensures a comprehensive and coordinated approach to your healthcare.
- **Patient-Focused Listening:** They take time to listen to your worries and concerns, as well as those of your family. They believe that understanding your perspective is vital in providing personalized care.
- **Health Education:** Our APPs are committed to helping you understand your health conditions. They explain the details of your health problems, medications, and other related topics to ensure you are well-informed about your health status and how to manage it effectively.
- **Individualized Care:** They provide care that is tailored to your unique needs. This includes considering your personal health history, lifestyle, and preferences when determining your treatment plan.
- **Medical Examinations and Procedures:** Our NPs and PAs are trained to perform physical examinations, treatments, and procedures as part of your ongoing care.
- **Laboratory and Diagnostic Studies:** They order and interpret laboratory and diagnostic studies to gain a complete understanding of your health status and guide your treatment.
- **Prescription Management:** Our APPs can prescribe medications and adjust these prescriptions as needed, ensuring you receive the most effective treatment for your condition.
